JAYSON QUINDAO

Technical Systems Analyst | Cloud & Financial Data Operations | Open to Relocation & Remote

Dallas-Fort Worth, TX (Immediate Relocation: NYC / SF / Nationwide) • (469) 371-8556 • jquindao1@icloud.com • https://djjrip.github.io

EXECUTIVE PROFILE

Results-driven Technical Systems Analyst and Financial Data Operations Specialist with 4+ years of experience automating multi-million-dollar interbank reconciliations, designing real-time API integrations, and resolving complex operational anomalies. Unrestricted domestic mobility; available for immediate nationwide relocation (NYC / SF / Tech Hubs) or full remote deployment. Proven track record at NCR Atleos reconfiguring bank routing parameters across national ATM networks with 99.9%+ balance sheet accuracy while cutting investigation cycle times by 40% using automated SQL/Python pipelines. Adept at translating ambiguous business rules into structured technical specifications, auditing data flows, managing incident response, and collaborating across engineering, treasury, and executive leadership.

CORE TECHNICAL COMPETENCIES

Systems & Operations:	Financial Settlement Reconciliation, Interbank Routing, Incident Response, Root-Cause Analysis, Business Process Mapping, SLA Management, Audit Defense.
Data & Querying:	SQL (PostgreSQL, T-SQL, MySQL, Query Tuning), Python (Pandas, Data Cleaning), Advanced Excel (Power Query, XLOOKUP, Modeling), JSON, XML, Data Mapping.
Integrations & Architecture:	RESTful APIs, Webhooks, Stripe Connect, Postman API Testing, WebSockets, Microservices Data Flow, System Integrations, Telemetry Ingestion.
Governance & Compliance:	SOC 2, HIPAA-adjacent Data Governance, Role-Based Access Control (RBAC), Jira, Confluence, Git/GitHub, Linux/Windows Administration, AWS CloudWatch.

PROFESSIONAL EXPERIENCE

NCR ATLEOS • **Frisco, TX**

Technical Systems & Financial Data Operations Analyst (Finance Associate II) | Aug 2021 – Nov 2023

- **National Settlement Systems Operations:** Managed daily multi-million-dollar cash payout reconciliations and reconfigured interbank routing parameters across national ATM networks, sustaining 99.9%+ balance sheet accuracy for Tier-1 financial institution partners.
- **Automated Data Pipeline Architecture:** Engineered and maintained automated Python and SQL data ingestion pipelines that reconciled disparate banking settlement logs, reducing manual spreadsheet audits and data entry by over 80%.
- **40% Anomaly Cycle Time Reduction:** Designed automated SQL anomaly detection queries to flag transaction variances and routing discrepancies, slashing investigation and resolution times from hours to minutes.
- **Cross-Functional Systems Governance:** Collaborated directly with enterprise database administrators, accounting managers, and internal auditors to diagnose root-cause discrepancies, authoring comprehensive technical documentation and audit workpapers.

MENTALIX, INC. • **Plano, TX**

Data Systems Operations & Security Specialist | Sep 2020 – Sep 2021

- **Regulated Data Pipeline Governance:** Administered high-volume biometric data ingestion pipelines across secure public-sector and enterprise environments, strictly enforcing data integrity and compliance protocols.
- **Data Ingestion QA & Optimization:** Identified, cataloged, and resolved data formatting anomalies across biometric capture software and database feeds, increasing ingestion throughput and data accuracy by 25%.
- **Access Control & Compliance Auditing:** Enforced strict Role-Based Access Control (RBAC) policies and audited system logs, achieving a 100% pass rate across internal security and data governance reviews.

GG LOOP LLC • **Dallas-Fort Worth, TX**

Founder & Technical Operations Lead | Nov 2023 – Present

- **Enterprise API Integrations & Billing:** Configured and maintained multi-party financial and service APIs (Stripe Connect, PayPal webhooks, Riot Games API), ensuring 100% idempotent transaction logging and real-time reconciliation.
- **Real-Time Telemetry & Systems Monitoring:** Architected AWS telemetry dashboards (CloudWatch, WebSockets, Lambda) to monitor system health, reducing operational incident detection time to under 15 seconds.
- **Operational Workflow Automation:** Built AI-assisted automated workflow scripts to parse structured JSON event payloads, automate operational notifications, and eliminate administrative overhead.
