JAYSON QUINDAO

PRINCIPAL SYSTEMS ARCHITECT & INFRASTRUCTURE ENGINEER

Dallas, TX • (469) 371-8556
jquindao1@icloud.com
github.com/djjrip • djjrip.github.io
U.S. Citizen (ITAR Eligible)

EXECUTIVE PROFILE

High-performance systems and infrastructure engineer with extensive experience architecting userspace security telemetry SDKs in Rust/C++, high-throughput event streaming pipelines in TypeScript/Node.js, and automated financial transaction systems. Founder of GG Loop LLC (open-source Rust telemetry SDK, sub-50ms WebSocket streams, PostgreSQL ACID ledgers). Proven enterprise background in automated financial reconciliation at NCR Atleos (cut transaction discrepancy resolution times by 40% across national ATM networks). U.S. Citizen with full ITAR/aerospace and defense compliance eligibility.

TECHNICAL COMPETENCIES

Systems & Security:	Rust (Cargo, Win32 Process/Memory Forensics, SHA-256 Hashing, HMAC Signing), C++, WebSockets, POSIX Sockets
Full-Stack & Cloud:	TypeScript, React, Next.js, Node.js, Python (FastAPI, Pandas), PostgreSQL (ACID Ledgers, Batch Ingestion), Docker, AWS, CI/CD
AI & Agentic Workflows:	Model Context Protocol (MCP), Autonomous Daemons, Claude/OpenAI APIs, Structured Output Enforcement, Playwright
FinTech & Settlement:	Double-Entry Accounting Engines, Stripe Connect Multi-Party Settlement, Webhook Idempotency, Interbank Routing

PROFESSIONAL EXPERIENCE

GG LOOP LLC — Founder & Principal Systems Architect
Nov 2023 – Present | Dallas, TX / Remote

Stack: Rust, TypeScript, Next.js, React, Node.js, PostgreSQL (Drizzle), Stripe Connect, WebSockets • github.com/djjrip/anti-cheat-sdk

- **Open-Source Rust Security SDK (anti-cheat-sdk):** Designed and shipped a high-performance userspace process auditing library in Rust featuring Win32 memory enumeration (K32GetModuleFileNameExW), SHA-256 executable integrity validation, and HMAC-SHA256 packet signing.
- **High-Throughput Streaming Engine:** Architected WebSocket and REST ingestion endpoints handling sub-50ms client event state synchronization with single-roundtrip PostgreSQL unnest() batch persistence and input variance detection under 2ms.
- **Double-Entry Financial Settlement:** Built tournament operating system (gg-loop-tournament.vercel.app) with ACID double-entry accounting ledgers, automated Stripe Connect multi-party payouts, and idempotent webhook replay verification.
- **Autonomous Infrastructure Daemons:** Implemented Model Context Protocol (MCP) servers and background daemons automating real-time telemetry validation, live endpoint health monitoring, and verified system deployments.

NCR ATLEOS — Finance Associate II | Systems & Process Optimization
Aug 2023 – Nov 2025 | Frisco, TX

Stack: Python (Pandas, NumPy), SQL (PostgreSQL, T-SQL), Automated ETL Pipelines, National ATM Network Operations

- **Automated Interbank Reconciliation:** Deployed Python and SQL ETL data pipelines reconciling $2M+ in daily transaction flows across national ATM banking networks with 99.8% ledger accuracy and audit compliance.
- **40% Dispute Cycle-Time Reduction:** Developed automated discrepancy-flagging algorithms in Python and SQL, cutting transaction dispute turnaround and resolution times by 40% (5 days to 3 days) and preventing 200+ recurring errors per month.
- **Systemic Troubleshooting & Partner Ops:** Achieved 100% resolution rate on 500+ assigned complex operational cases; managed automated cash settlement and transaction routing workflows across 80+ partner financial institutions.

MENTALIX, INC. — Data Systems & Quality Assurance Specialist
Sep 2022 – Sep 2023 | Plano, TX

- **High-Volume Pipeline Governance:** Managed secure biometric and healthcare data processing pipelines with 99.9% accuracy; implemented automated quality control checks that accelerated throughput by 25% and reduced processing cycle time by 30%.

EDUCATION

TARRANT COUNTY COLLEGE — Associate of Arts (Core Curriculum Completed)
Fort Worth, TX

Undergraduate Transfer Track • Foundations in Mathematics, Computer Systems & Analytical Reasoning
